

Superlux Energy Saving (SBF) Self Ballasted Fluorescent Lamps

We would like to bring to your attention our great range of energy saving fluorescent lamps, with many styles available, Superlux have a lamp for you.

Superlux lamps have a fast warm up time and come to full brightness within a minute unlike other brands which can take up to 5 minutes. Most of our lamps come in the preferred cosy "warm white" light. With "Cool White" and "Day Light" colour temperatures available in lamps most suited to outdoor or commercial applications.

The right energy saver lamp in fittings will give you the same or better light output and will save up to \$500 per year for an average 3 bedroom home with energy saver lamps fitted.

Whilst the initial lamp cost will be a little more than the old style GLS lamp, you will see the savings on your power bill immediately and the extra spent on the lamp is paid back in a little as 2-5 months*, there after 80% savings are made, along with the added benefit of time saved on changing bulbs less often.

**based on 20W SBF lamp with a purchase cost of \$5 running for 2-5 hours per day*

Welcome to the first edition

In this issue:

Save up to \$500 per year by installing energy efficient lighting.

Look out for . . .

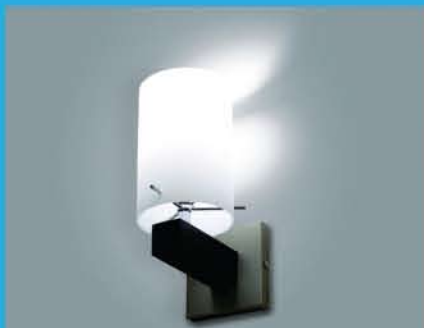

Our comprehensive catalogue notes what type of energy saver lamp can be used with certain fittings, look for these symbols throughout the Superlux catalogue.

Colour Temperatures

Warm white

Is what home owners are traditionally used to. The colour of light is more like a warm fire glow.

Cool white

Is a little crisper than halogen lamps and are still suitable for home use.

Day light

Is near the blue end of the spectrum and is usually too bright for a home in fact it can make a home feel clinical and yuck, they are best suited for in the garage and in commercial applications.

SBF3U-15EWW

- Overall length 137mm x 40mmØ

SBF3U-18EWW

- Overall length 164mm x 50mmØ

SBF3U-20BWW

- Overall length 170mm x 50mmØ

SBF4U-65EWW

- Overall length 225mm x 66mmØ
