

Single Pendants & Shades

Things to Know

We offer an extensive selection of shades in a variety of materials and finishes. Shades and pendants can be the perfect accent to entrances, kitchens, dining and entertaining rooms whilst providing convenient general lighting.

Single lamp pendants are a simple way of lighting an area and are easily installed. They are also very efficient as utilisation is high with light being reflected off ceilings, walls and downwards as down lighting, little light is wasted.

Metal Shades

Modern metal shades eliminate glare and are brilliant for directing light towards work surfaces, preparation areas and serveries, etc.

Halogen Pendants

New technology halogen lamps mean that more styled, petite, slimline pendants are available and look stunning in groups of three or five over serving areas. If a warm light rendering is desired use G9 and GU10 (240 volt) halogen, or if you favour a crisper, whiter light use 12 volt halogen (incorporating transformers).

If a halogen pendant is rated 50-watt maximum and you wish to use a very small shade, it will be necessary to use a lower wattage lamp to achieve durability. Select wattage of lamp according to type of shade selected.

Glass Shades

Glass invented in 900BC has been one of the world's most ingenious and adaptable inventions. Glass shades soften the appearance of light and colour glass shades add impact and distinction. Superlux import a dynamic range of glass shades from Spain, Italy and Germany. These countries have been Glass specialists since the Romans imported the technology from the Egyptians, about 14AD.

Glass shade types include:

White Opal	Coloured
Acid Etched	Painted
Duplex	Dichroic
Triplex	Mirrored

Various shapes are pressed or blown and hand finished.
